

Digital Earth Africa Coastlines: a continental-scale service for monitoring coastline changes around Africa

Plenary session #3
Coastal Hazards

Dr. Lisa Rebelo

*Lead Scientist,
Digital Earth Africa*

5th Symposium | Accra, Ghana | 24 – 28 October 2022

Digital Earth Africa Coastlines: A Continental Coastline Monitoring Service

AFRICA

Our Vision

DE Africa will provide a routine, reliable and operational service, using Earth observations to deliver decision-ready products enabling policy makers, scientists, the private sector and civil society to address social, environmental and economic changes on the continent and develop an ecosystem for innovation across sectors

Land degradation

Urbanisation

Water resources and flood risks

Agriculture and food security

Coastline change

Digital Earth Africa's continental-scale satellite data archive

- 36 years (> 3 petabytes) of Landsat and Sentinel-2 satellite imagery from 1986
- Freely accessible in the cloud via Open Data Cube and AWS S3 + STAC
- Continental scale products and services
- Analysis tools and training materials
- Different interfaces for difference needs

The Context:

Coasts serve as major socio-economic hubs for 38 African countries:

- Africa's coastal areas host half of the 15 African megacities which are fast expanding due to rural-urban migration and population growth
- The African blue economy is expected to be worth \$405 billion and employ more than 57 million people by 2030
- Coastal communities and the blue economy are vulnerable to the impacts of climate change

Ocean Decade: Blue economy presents vast opportunities for Africa, Africa Renewal, 2022.

The Issues:

Rising sea levels and rates of coastal erosion represents a pressing threat for African coastal communities, real estate, agriculture and aquaculture:

- Coastal erosion has a severe impact on African land and buildings with estimated losses of \$8 billion per year
- Coastal erosion has consequences for fish populations, marine ecosystems and local communities

Effective management of coastal changes and mitigation of risk, as well as sustainable coastal zone management, rely on consistent and regularly updated data across the continent

Monitoring coastlines is challenging:

- Dynamic - constantly changing with hazardous conditions
- Intensive coastal monitoring expensive and impractical at scale
- Usually restricted to well studied local sites and populated areas

Freely available satellite image archives can offer a powerful and cost-effective tool for monitoring coastlines at regional and national scales

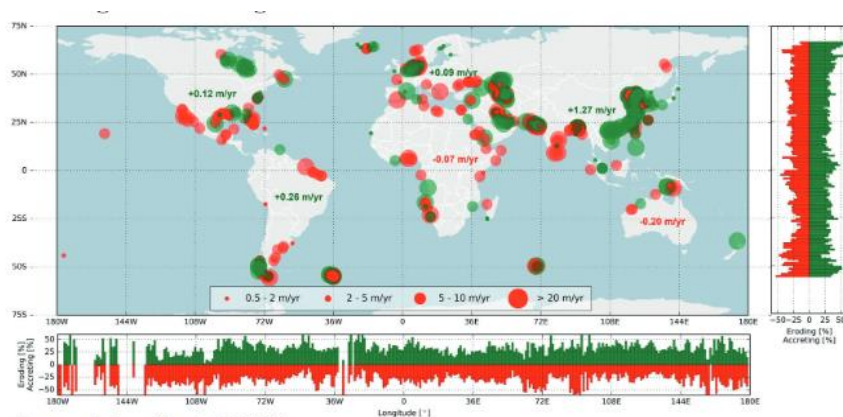

Digital Earth Australia Coastlines: A Coastline Monitoring Service

- Based on Australian innovation @ Geoscience Australia - Open Data Cube
- **First Continent-wide** Coastlines monitoring service
- Based on historical satellite imagery – Landsat
- Includes tidal modelling
- Accurate down to 10m
- Track continental changes since 1988, updated annually
- Monitors more than 33,000 km of coast
- Used by industry and local councils

State of Knowledge:EO Studies covering Africa

- **Worldwide** Luijendijk et al (2018) - 500m transect - <https://aqua-monitor.appspot.com/?datasets=shoreline>, unvalidated, Google Earth Engine, no tidal correction
- **Sandy Beach Evolution Around Seaports** (Wiebe de Boer et al. 2019) ports only, Google Earth Engine
- **Maghreb, Tunisia and Morocco** - National Oceanography Center (Marines resource, ESA, World Bank, 2020), unvalidated, no tide modelling - Google Earth Engine

Source: Luijendijk et al (2018)

Digital Earth Africa Coastline Monitoring Service

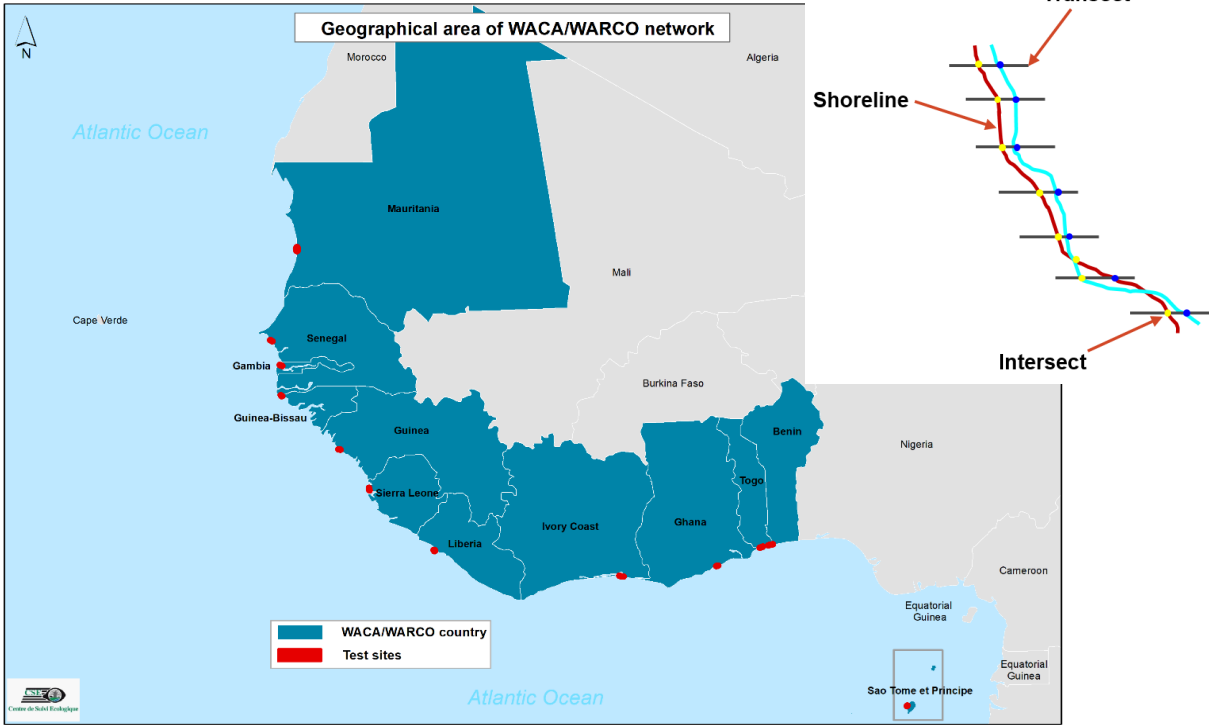

Digital Earth Africa Coastlines

- **Improved version** of the Australian Coastlines
- **Co-developed and validated** with implementing partners in Africa
- **First Africa-wide** Coastlines monitoring service
- Tracks continental changes **from 2000 to present**
- Monitor more than **60,000 km of coast**
- Provides **free interactive access** to
 - Hotspots
 - Rates of changes
 - Average yearly shorelines

Coastlines Validation:

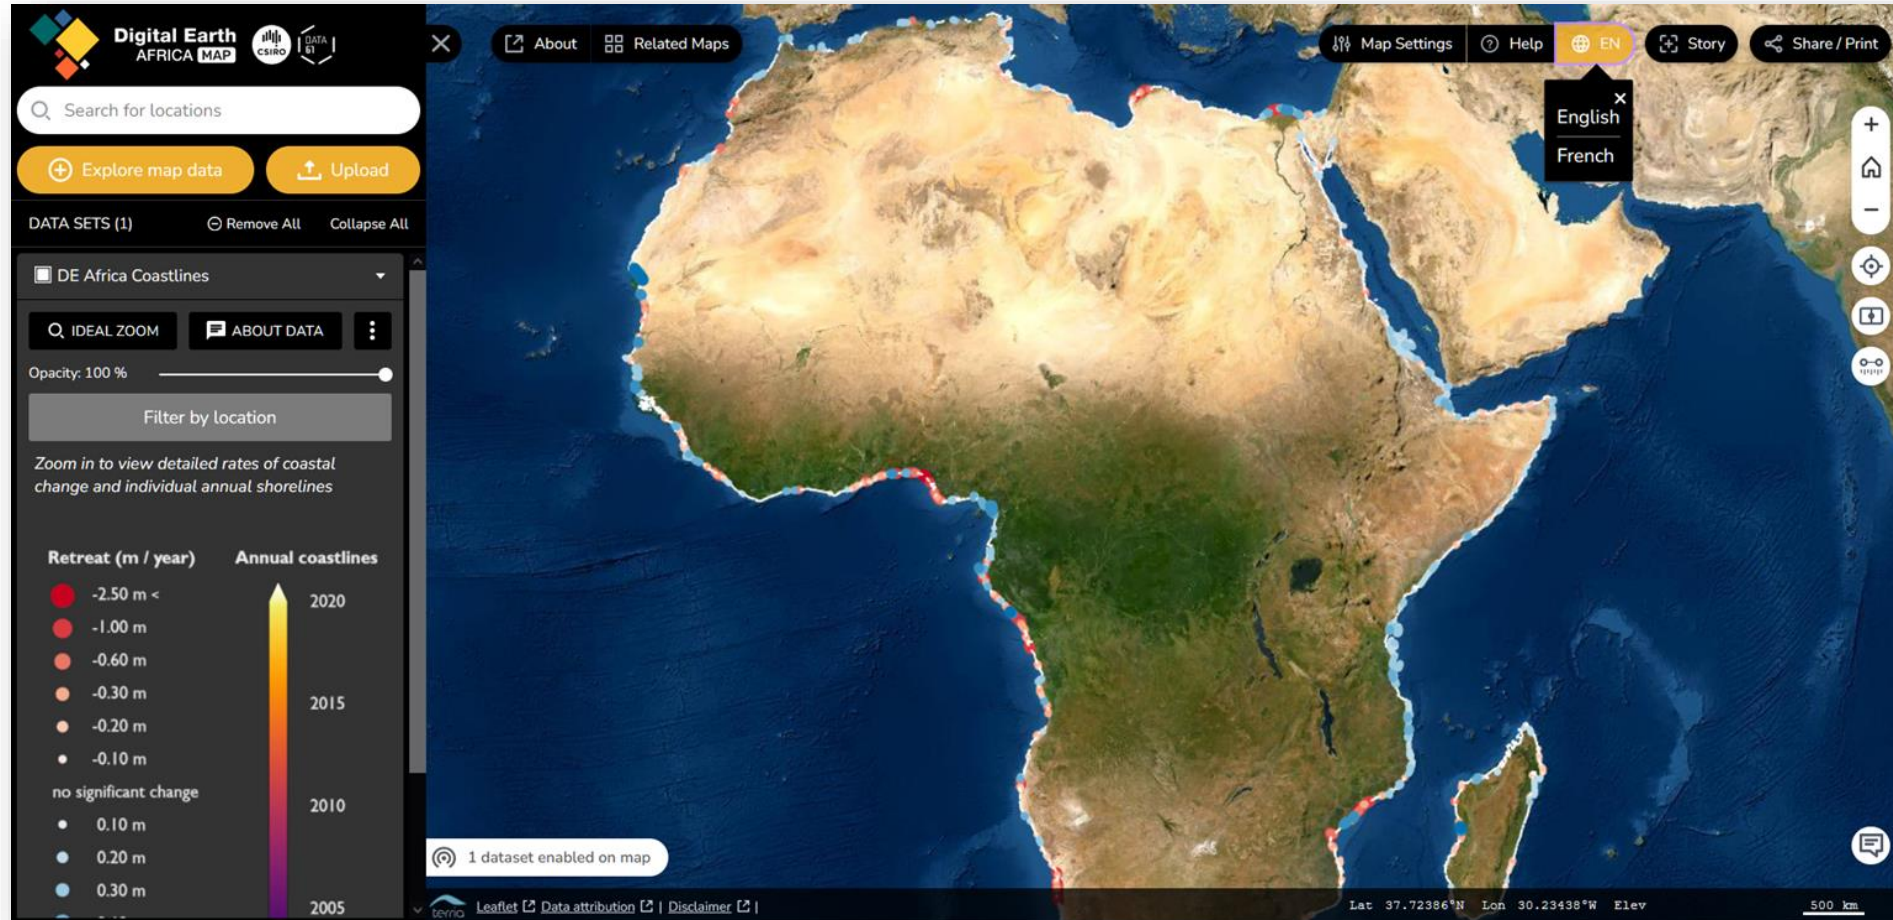

Pays	Min	Max	MAE	RMSE (m)	RMSE %	RMSE (Px)	PRECISION
Mauritanie	0,00	31,29	7,17	8,79	29,30	2/5	Bonne
Sénégal	0,36	10,17	4,51	5,42	18,07	1/5	Très bonne
Gambie	0,00	22,32	5,26	7,77	25,90	2/5	Bonne
Guinée Bissau	0,37	16,00	6,41	7,80	26,00	2/5	Bonne
Guinée	0,25	24,81	8,14	9,75	32,50	2/5	Bonne
Libéria	0,12	17,15	8,21	9,31	31,03	2/5	Bonne
Sierra Leone	0,02	21,43	6,21	7,87	26,23	2/5	Bonne
Côte d'Ivoire	0,15	12,50	4,34	5,48	18,27	1/5	Très bonne
Ghana	2,43	17,44	10,33	10,91	36,37	2/5	Bonne
Togo	0,01	16,30	2,95	4,39	14,63	1/5	Très bonne
Benin	0,00	14,85	4,83	5,61	18,70	1/5	Très bonne
Sao Tomé et Principe	0,02	12,19	2,64	4,12	13,73	1/5	Très bonne
Moyenne	0,31	18,04	5,92	7,27	24,23	2/5	Bonne

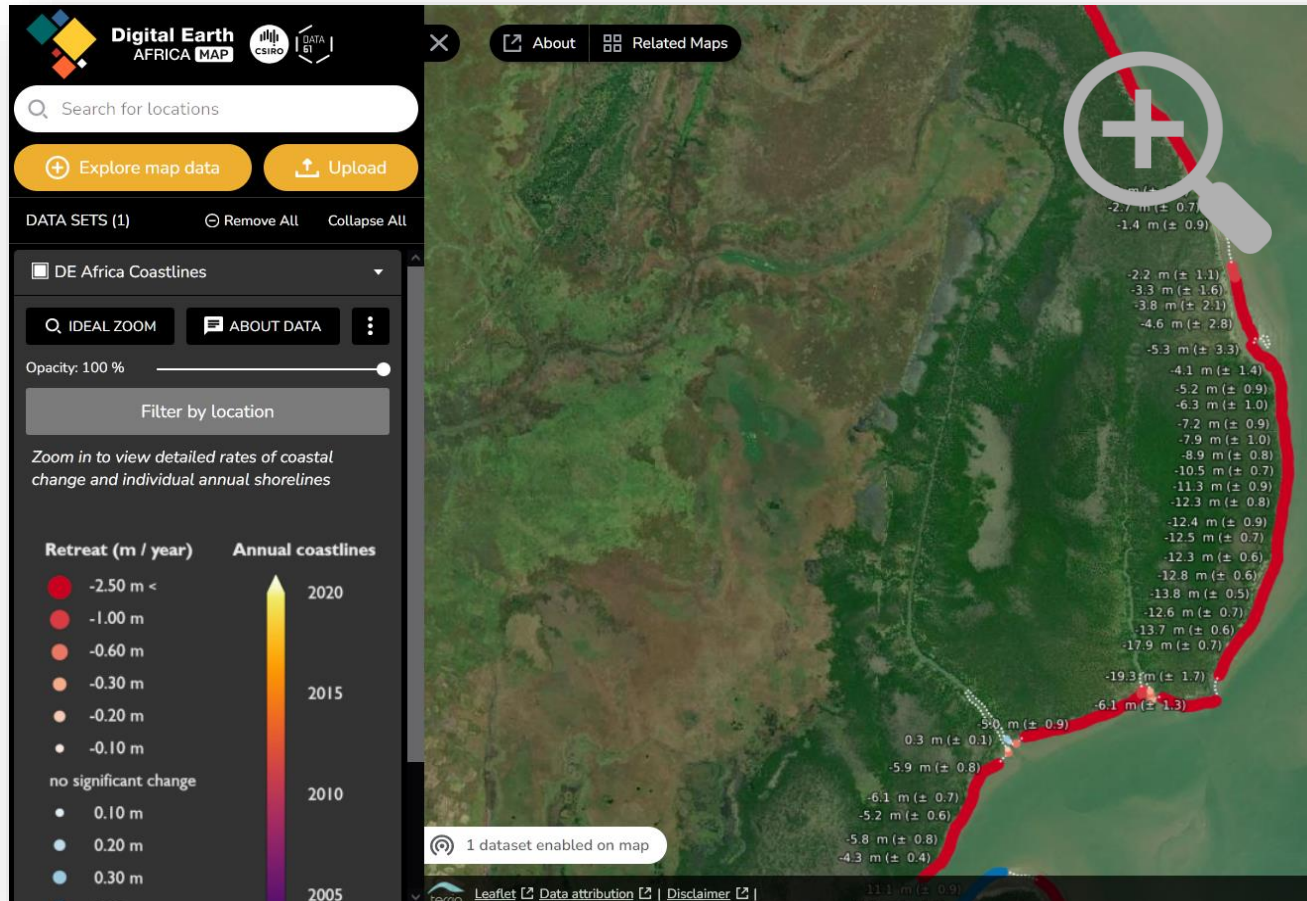

View it on the Maps

<https://maps.digitalearth.africa/>

Identify hot spots and rates of change

Understand uncertainties, identify impacts

Good quality shorelines
— 2000

Low quality shorelines
-- 2000

Integrate and Redistribute the Data

- WMS and WFS links allows direct integration in QGIS, ArcGIS or **any OGC Web Service compatible platform**
- No commercial license, **free for all users, including Industry to create own Services**
- **Training tools** are available to understand better the methods used and also to tailor the outputs to your need

The Benefits – Economic Valuation

By mitigating coastal erosion risks in 3 key sectors, Digital Earth Africa could inject ~\$460 million per year into Africa's economy and change the lives of ~270 million people.

REAL ESTATE &
AGRICULTURE

\$101 MILLION

of asset
value (land &
buildings) saved
per year

FISHERY

\$185 MILLION

the potential
benefits per year
by alleviating the
loss of fish catches

INSURANCE

\$176 MILLION

per year in
additional profits
& jobs for the
insurance industry
